## 150-Watt DM transmitter

- 4A output current
- Powered by AC or DC external power
- Overvoltage, power, and temperature alarms
- Use on online pipeline, telephone, and fiber
- Identify the location of coating defects, faulty insulation joints, and cable faults

This powerful **150-watt transmitter** is the go-to transmitter for cable fault locating, finding holidays on coated pipes, and problematic deepburied lines and long-distance pipe and cable locating. The Loc-150Tx is typically used with the Defect Mapper (DM) Receiver on cathodic protected online pipelines. However, it is also well suited for those needing a low frequency, high output transmitter.

The Loc-150Tx transmitter has selectable frequencies from 98Hz to 640Hz. The two-inch by one-inch backlit dot matrix display shows output current, volts, resistance, frequency, volume, and high voltage warnings. Two rotary/push control knobs provide access to frequency selection, output level, menu information, and active/standby modes. This transmitter is supplied with a direct connection lead, DC input lead, AC mains lead and ground stake.

Packaged in a rugged, ergonomic IP54 housing, this transmitter provides consistent current output with protection against inadvertent connection to incoming voltages up to 250V.

Output fuse protected against inadvertent connection to incoming voltages up to AC/DC 250V
